Clean The Diverter

To keep the diverter clean at all times, dismantle it for cleaning periodically.

Step 1:

Rotate diverter to treated mode. Remove the diverter and twin tubing.

Step 2:

Remove cap & collimator from treated water port. It is normal to see crystallised minerals here.

Step 3:

Using the tip of a toothpick, remove gasket support from treated water port.

Step 4:

Separate the Black & White gasket.

Step 5:

Mix 40ml Dish Drops™ Concentrated Dishwashing Liquid with warm water to make into a 1L solution. Soak all parts in this solution for 20 minutes.

Step 6: Use a toothbrush to clean difficult areas.

Step 7: Rinse well with water.

Step 8: Repeat all steps until desired results are achieved before replacing everything into their original positions.

Status Indication

When it is switched to 'treated water'

Normal

When the electronic display is at this status

- It indicates that the water treatment system is working properly.
